**OPEL cigar lighter with lamp and ashtray lamp**

---

---

**For OPEL Kadett-E**

---

**I. Scope of delivery**

- 1 x cigar lighter
- 1 x ashtray lamp
- 1 x bulb
- 1 x lamp ring
- 1 x installation instructions

**II. Preparations for assembly**

The inside of the ashtray and the cigar lighter are to be fitted with additional lighting. The following work must be carried out. First disconnect the battery earth strap. Then remove the cigar lighter aperture dummy cover from the central console (Fig. 1). Take out the ashtray.

**III. Assembly**

Undo the connection cable from the wiring harness of the instrument panel (Fig. 2). Mount ashtray lamp 1 on the multiple plug. Mount the cigar lighter bulb with its socket on the flat plug sleeve. Position the ashtray lamp with socket in the aperture provided in the central console from the rear (Fig. 3). Guide the cigar lighter bulb with its socket and multiple plug through the aperture for the cigar lighter from the rear (Fig. 3). Secure the cigar lighter bulb with its socket to

the lamp ring and position the assembly in the aperture. Guide the multiple plug further towards the outside so that the cigar lighter plug can be connected to it. Position the lamp ring in the aperture (Fig. 4) and the cigar lighter plug in the lamp ring (Fig. 5). Ensure that the lamp ring detents slide over the full surface of the plug cylinder (Fig. 6). Push the plug all the way into the lamp ring and turn slightly to the right (Fig. 7) until the detents click into place (Fig. 3). Then put the cigar lighter into the socket (Fig. 8).

**IV. Final assembly/Testing**

Refit the ashtray. Reconnect the battery earth cable. Test the function by switching the ignition on. The ashtray lamp and the lamp ring of the lighter must then illuminate. Press in the cigar lighter. After a short time the lighter coil will be glowing.
